A Future in the Pipeline.

Drainways provides for the future health and well-being of communities through the construction of fresh water, drainage and infrastructure systems that are built to last.

Our track record of completing projects within set time-frames and budgets has made us a trusted partner of councils and local bodies, as well large industrial and commercial organisations.

Stormwater. Water Reticulation. Waste Water.

Whatever the challenge, whether it's constructing underground services for a multi-lot subdivision or implementing a major civil infrastructure upgrade, Drainways has the certifications, expertise and resources to manage any project through to completion.

Serving Hawke's Bay since 1976.

Drainways is a family-owned business founded on old fashioned values and professionalism. We work with a select group of sub-contractors who share these same values and work ethic.

With over 40 years' experience working in Hawke's Bay, we've built a reputation for high calibre workmanship, doing what we say we'll do, and thinking on our feet to address some of the unique challenges presented in our local environment.
